

ISSUES ON AGROLIVES DASHBOARD

- ✓ When a user clicks on "View All Notifications," no additional notifications are displayed, which means users can't access their full notification history as expected.
The system currently shows a maximum of 5 notifications, even if more (e.g., 10) are available. This restricts users from viewing older notifications beyond the initial 5, limiting their ability to see all relevant updates.
No notification when a new supplier is added.
- ✓ The dashboard should ideally display a list of predefined categories that the admin can select from when creating a new product. This helps ensure each product is placed in the correct category, aiding in better organization and user experience on the platform.(if already added)

ISSUES ON AGROLIVES APP

- ✓ When user delete account and use the same email to register then verification email after user registering is not easy to be sent at a time i.e. verification email are sent but took a lot of seconds.
- ✓ User profile picture is not available.
- ✓ There is no notification icon in a mobile app

ISSUES ON ATTORNEYS DASHBOARD

- ✓ There is no notification icon in a dashboard.
A notification icon on the dashboard offers a convenient, visible way for users to check for updates without navigating to other sections.

ISSUES ON ATTORNEYS APP

- ✓ There is no notification icon in a mobile app
Example When attorney assigned a case or issue no notification on a mobile but issue assigned are sent directly in email which is difficult for user to look at email at same time.
- ✓ Missing number to some clients after fully registered in the app.
Means that number can appear after user edit its profile otherwise the system skip to retrieve number in registration process.
